Phase 1:
Help Flatten the Curve
COVID-19 Assessment, Testing & Contact Tracing App
Austin, Texas

With the swipe of a finger or the click of a mouse citizens can access a secure application to self-assess for common symptoms of COVID-19, schedule and get a test and receive test results through a secure portal. Citizens testing positive for Coronavirus can initiate contact tracing on the portal through the app. Anonymized data-generated heat maps will help identify high-risk areas across the city or state.

1 Undiagnosed Sick
Citizens exhibiting possible symptoms of COVID-19.

2 Register On Portal
Gather information and securely sign-up online or by smartphone.

3 Self-Assessment and Testing Recommendation
Take a symptom survey and receive a risk rating and testing recommendation.

4 Scheduling
Citizens recommended for testing choose a test location, set an appointment and receive a unique QR code to expedite check-in.

5 Testing & Results
Citizens check-in and are tested for COVID-19. Citizens are then sent results and instructions on next steps through the secure portal.

6 Contact Tracing
To the extent allowed by law, citizens receiving a positive test can voluntarily provide contact information for individuals they potentially exposed.

7 Heat Mapping
Anonymized data will be used to identify high risk areas, assess testing demands, staff healthcare professionals and determine hospital capacity.

Flexible Solution
- Scalable to expand as needed
- Quick setup
- Drag and drop functionality

Salesforce Platform
Engineered to enable client solutions to be FedRamp and HIPAA compliant
